

Touchless Invoice Agent

Take any client's timesheet, in any format, all the way to a validated invoice in their inbox, with people stepping in only by exception.

THE PROBLEM TODAY

Invoicing TASC's contract staff is slow and manual. Every client sends timesheets in a different way, and the Financial Operations team re-keys each one, builds the invoices, checks them by hand, and emails them out.

- Any format, any channel, including handwriting.
- Heavy re-keying and manual checking.
- Days to turn around, with no visibility for clients.

HOW IT WORKS

- 1 Capture** Collect timesheets from email, the client portal and the timesheet app.
- 2 Understand** Read typed and handwritten entries, then merge into one upload-ready file.
- 3 Generate** The TASC Smart Bot loads the payroll system and produces the invoices.
- 4 Validate** Check each invoice against the client's business rules and flag exceptions.
- 5 Deliver** Send in each client's preferred order and track approvals on one dashboard.

WHAT SUCCESS LOOKS LIKE

PRIMARY MEASURES

80%+

of invoices completed start to finish with
zero human touch

Within minutes

from timesheet received to invoice sent, instead
of days

99%+

data accuracy, with low-confidence items
routed to a person
